## **DETAILED ACTION**

### ***Response to Amendment***

The applicant is reminded that in order to overcome a rejection under 35 U.S.C. 102 (e), an affidavit or declaration must be submitted in compliance with 37 CFR 1.131.

The oath or declaration is missing. A new oath or declaration in compliance with 37 CFR 1.131 identifying this application by number and filing date is required. See MPEP §§ 715.04.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 11 and 12 rejected under 35 U.S.C. 102(e) as being clearly anticipated by U.S.

Patent No. 6,281,974 to Scheiner et al. (hereto referred to as Scheiner).

As to claim 11, Scheiner discloses a method and apparatus for measurements of patterned structures including:

measuring at least one of the reflection and the transmission light intensity values of zero order of diffraction as a function of wavelength (see col. 2, lines 61-64);

Art Unit: 2877

calculating the at least one of reflection and transmission light intensity values using an iteration model in which the individual layer parameters and the geometric dimensions of a substrate are included as further parameters (see cols. 7-11); and

modifying the parameters to effect correspondence between the measured and calculated values (see bottom of col. 9).

As to claim 12, Scheiner discloses determining the geometric dimensions of said geometric structures (see bottom of col. 9, top of col. 10).

As to claim 13, Scheiner discloses that this method for use in regulating production processes (see col. 3, lines 4-13).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 14-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,281,974 to Scheiner et al. (hereto referred to as Scheiner).

As to claims 14-19, while Scheiner does not teach specific structures or media to be measured by the disclosed method and apparatus, it would have been obvious to one of ordinary skill in the art at the time of invention to apply Scheiner's apparatus and method to measure geometric characteristics of optical data storage media, as these are notoriously well-known substrate structures.
